

Hosted Backup

Secure Off-Site Protection for Your Critical Data

Many businesses rely on tape drives, an external hard drive, or a DVD to backup critical company files and data. While this may help in the case of a desktop or server failure, what are your business continuity plans when confronted with a disaster, such as a flood or fire? Where do you restore your data from then? And truthfully, when was the last time you did a backup?

Hosted Backup is an easy-to-use, cost-effective solution designed for small to medium-sized businesses.

Enterprise Data Center

Your business data will be stored in a first-class, SAS70 and ITIL certified data center. You automatically receive all the benefits of a redundant, highly available, highly reliable environment which we build for you.

Secure and Redundant Bandwidth

Our primary data center in New Jersey boasts multiple secure redundant connections. In conjunction with our In-File Delta and Seed-Load technologies, backing up a large amount of data can be completed in a very short period of time.

Data Encryption

All data is 256-bit encrypted and compressed before it is uploaded to our backup server via a secure SSL connection channel. The encryption key is not uploaded to the backup server during backup, ensuring full protection of the data.

Robust Backup Features

Hosted Backup comes with enterprise-class backup features including Windows, Linux, Mac, cross-platform operation, Protection of files, Microsoft Exchange multi-level backup, high availability, In-File Delta block-level incremental / differential backup, 256-bit advanced encryption, and much more.

Fully Automated

Your backup job will automatically run every day according to the schedule you have defined. Automation reduces the risk of missed backups caused by human intervention or carelessness. Notification alerts are sent to you in the unlikely event that the backups fail.

Multi Versioning

Our In-File Delta, and flexible retention policy allows a file to have multiple backup versions kept in the remote backup server. You can define the number of versions a file needs retained, as well as the duration of a deleted file that is required to be retained, based on your own need, or company's backup policy.

Restore Data Anytime, Anywhere

Hosted Backup provides online data restore functions, which allows you to restore backed up data via the Internet at any location.

Comprehensive Backup Reports

The software will provide backup reports with detailed backup status and statistics to all users through email.

Atrion Corporation partners with RealWare; a Managed Service Provider (MSP), a Managed Application Service Provider (MASP), and a Managed Security Service Provider (MSSP) to deliver, monitor and manage the Hosted Backup solution. (www.real-ware.com)

RealWare utilizes Ahsay Backup Software. (www.ahsay.com)

Please Select Your Devices, Number of Seats or Servers, and Total the Cost

Desktops			
Storage Space*	# of Seats	Monthly Cost	Total
Up to 50GB		\$ 29.00	\$

Servers (SQL, Exchange, etc.)			
Storage Space*	# of Servers	Monthly Cost	Total
Up to 100GB		\$ 67.00	\$

Grand Total (Monthly)	\$
------------------------------	----

***Note:** Storage costs are based on the **aggregate** total of all data. For example, if your business is backing up 10 servers, you have a full Terabyte (TB) of data before you will be charged any additional storage fees, regardless of whether or not some servers have more than 100GB and some have less. Any overage beyond the aggregate limit is billed at \$0.40 per GB.
